Join us to kick-off the Milwaukee Chapter 2017/2018 year of events. We are excited to start this year's activities at Westallion Brewing Company, West Allis' first brewery. Opening in 2017, Westallion is one of the area's newest micro-breweries. There will be an opportunity to try some of the many craft brews available for those 21 and over.

A catered dinner will be enjoyed in the Tasting Room, followed with a technical talk by Stephanie Britton, PhD of Air Products. Stephanie has been with Air Products Corporation for ten years in a variety of responsibilities; including research and development, supply chain support, materials testing and failure analysis. She has expertise in hydrogen plant processes, metal dusting and corrosion of metallic materials, polymeric materials and composites. Stephanie received her BS in Chemistry from the Indiana University of Pennsylvania and her PhD in Materials Science from the University of Wisconsin - Madison.

We will also provide an update on ASM Milwaukee Chapter activities for the 2017/2018 season. Please join us for an enjoyable evening of camaraderie and local beer. We look forward to seeing you there!
